

WHO THIS IS FOR

Leadership, operations, and the person or provider responsible for email, access, backups, website exposure, and recovery.

Nulvex Security Baseline

A practical baseline for small businesses to check the basics before a bad day turns into downtime, client disruption, or an expensive recovery.

Forward this to whoever owns IT, access, backups, or recovery. If the answers stay vague, the risk is still real.

01

RECOVERY

If your systems were disrupted tomorrow, what gets restored first — and who decides?

Look for clear priorities, ownership, and a realistic recovery order.

02

BACKUPS

Are your backups separated, tested, and likely to survive the same incident?

Look for separation, testing, and a last good copy that cannot be quietly compromised too.

03

ACCESS

Could one compromised account expose more of the business than it should?

Look for limited admin access, role separation, and prompt removal of old access.

04

VISIBILITY

Would you know about a serious issue before clients or staff felt the impact?

Look for monitoring, alert ownership, and a real response path.

05

BUSINESS IMPACT

What would one day of disruption actually cost in revenue, time, and trust?

Look for an honest business answer, not a vague technical reassurance.

ONE LAST QUESTION

If the answers still sound vague, would you really feel good waiting?
