NULVEX

BASELINE

SECURITY REVIEW

Find the gaps that can stop the business.

A focused security review for leaders who need clear answers on downtime, recovery, access exposure, and operational resilience before an incident forces the conversation.

Free five-minute self-check

NULVEX

01 · BUSINESS EXPOSURE

Incidents are technical. Impact is business.

Nulvex Baseline turns security uncertainty into board-level clarity. It helps you understand what would fail first, what would recover first, and what needs attention before a real interruption.

01

Downtime priority

Know which systems keep the business alive and who decides the recovery order.

02

Recovery confidence

Separate backup existence from actual restore confidence, timing, and evidence.

03

Access exposure

See whether one compromised account could reach too much of the company.

04

Operational visibility

Understand whether your team would notice early, or only after clients feel the impact.

02 · THE BASELINE

A practical first review for serious operators.

Nulvex Baseline is the starting point before deeper hardening, monitoring, or response work. It maps the weak points that create business exposure and gives your leadership team a clean, prioritized view of what should happen next.

01

Business risk snapshot

A plain-English view of what could interrupt operations, revenue, or client trust.

02

Evidence questions

Specific checks your IT team or provider should be able to answer without vague promises.

Next-step direction

CLARITY · PRIORITY · A PRACTICAL NEXT STEP

03 · FREE FIVE-MINUTE SELF-CHECK

Answer the questions your business cannot afford to guess.

This check is not a penetration test and it does not replace Nulvex Baseline. It gives you an immediate signal: clear, unclear, or exposed.

01

If the main systems went down tomorrow, is the recovery order already agreed?

Yes, documented and owned · Partly, but not tested recently · No clear answer

02

Could the same incident damage production systems and backups?

Backups are isolated and restore-tested · Backups exist, but isolation is unclear · We are not sure

03

Would one compromised account expose too much of the company?

Access is limited, reviewed, and logged · Some controls exist, but coverage varies · Probably, or we do not know

04

Would you know about a serious issue before clients notice?

Yes, alerts are active and reviewed · Some alerts exist, but response is informal · Only after users report it

05

Can leadership name the cost of one business day offline?

Yes, with operational and client impact · Roughly, but not formally agreed · No reliable estimate

04 · EVIDENCE INTO ACTION

A serious provider should welcome clear questions.

If your current IT or security provider can answer the Baseline questions with evidence, that is a good sign. If the answers are vague, Nulvex Baseline gives you a structured way to close the gaps.

01

Ask for proof

Restore tests, access reviews, alert ownership, incident contacts, and business impact assumptions.

02

Prioritize what matters

Focus first on the systems, accounts, and recovery paths that protect revenue and client trust.

03

Move from review to action

Use Baseline to decide whether you need Nulvex Core, Watch, Response, or targeted remediation.

Start with the gaps that can stop the business.

Bring the PDF to a leadership meeting, send it to your provider, or ask Nulvex to run the Baseline with you.

The free self-check and public brief do not include scanning, access to your systems, or a formal audit opinion. The paid Security Review starts only after written scope and authorization. · audit.nulvex.com · contact@nulvex.com
